SUMMARY

Backend engineer with 6+ years of experience building high-availability APIs, cloud security services, AI solutions and critical public platforms. At **MercadoLibre**, I built security and access-control services in Go and Python on AWS, along with AI projects to automate security processes. Previously, I built the backend for **11 digital government platforms funded by the Inter-American Development Bank (IDB)** across Latin America, including AI tools for road infrastructure and public safety, and developed websites and chatbots for two of South America's main airports. Co-organizer of Node Colombia since 2018 and Google Women Techmakers Ambassador.

TECHNICAL SKILLS

Languages	Go, Python, TypeScript, JavaScript (Node.js), Java, COBOL, Solidity
Frameworks	Express, Flask, React, Vue.js, Odoo ERP, Celery, Pydantic, Knex, Hardhat
AI & ML	Computer vision with TensorFlow, AI automation, chatbots, AI-assisted development (Cursor, Claude)
Cloud & DevOps	AWS (EC2, S3, RDS, IaC), Azure, GCP, Docker, Nginx, Linux, Git & GitHub
Databases	PostgreSQL, MySQL, SQL Server, MongoDB, Redis
Architecture	REST APIs, microservices, layered architecture, DDD, Repository pattern, OpenAPI / Swagger, distributed task queues
Security	Vulnerability auditing, access control and allowlists, RBAC, JWT

PROFESSIONAL EXPERIENCE

MercadoLibre • Backend Developer (Go • Python • AWS)

Jun 2024 – May 2026

Microservices on Fury, MercadoLibre's internal platform, focused on AWS infrastructure security.

- Led the technical development of a **Go service that analyzes URLs in real time** against VirusTotal's engines and classifies risk into four levels: safe, low, medium and critical.
- Built an **access-control rules engine** to manage allowlists, integrated with the company's internal access management tool.
- Led the **cleanup of unused AWS allowlist rules**, reducing attack surface and operating costs.
- Developed **AI projects** to automate allowlist generation and validation, cutting analysis time and manual errors.
- Designed and refactored high-availability REST APIs, including data modeling and optimized relational databases.
- Audited vulnerabilities and mitigated risks with teams across the company under internal security standards.

Sinapsis • Backend Developer (Node.js • TypeScript • Python)

Dec 2022 – May 2024

11 digital government, regulatory and public infrastructure platforms across Latin America, including AI tools, funded by the Inter-American Development Bank (IDB).

- **AI for road infrastructure (Pavimentados):** integrated TensorFlow computer vision models that detect pavement damage and road signs from GPS-tagged images and video. Built the Python platform that processes video in the background with Celery and Redis. Open-source IDB tool.
- **AI for public safety (Safe Cities):** contributed to the development of this AI and data analytics tool that helps local governments diagnose and prioritize their public safety issues in real time.
- **Costa Rica's utilities regulator (ARESEP):** designed the API and LACChain smart contract that make its open data verifiable and tamper-proof. Authored the OpenAPI 3.0 documentation and deployment guide.
- **Chilean Congress:** API for the Open Government legislative portal using layered architecture (domain, application, infrastructure) in TypeScript and PostgreSQL, deployed on AWS.
- **Legacy modernization:** redesigned a national innovation funding platform where adding one form field required changes to HTML, database and backend. Proposed no-code dynamic forms, six-role RBAC, collaborative editing and web scraping of funding calls.

- **IDB website security:** took over operations of the IDB's WordPress sites, with twice-weekly vulnerability reviews and maintenance processes that didn't exist before.
- Other projects: UN Tourism's Tourism Law Observatory (AWS infrastructure design and cost estimation), Congreso Virtual (Chile), Paraguay's citizen complaints platform and digital health, on AWS and Azure.

PLM Group · Fullstack Developer (Vue.js · Node.js · AWS)

Aug 2021 – Dec 2022

- **Jorge Chávez International Airport (Lima):** built the public website end to end, including passenger information, terminal services and flight search.
- **El Dorado International Airport (Bogotá):** public portal, arrivals and departures board, and terminal business directory.
- Built **chatbots** for the airport websites that answer passenger questions automatically.
- Tools for industrial brands: energy savings calculator (Haceb), product catalog (Pintuco) and corporate website (Casa Magna).

Ozel Producciones · Backend Developer (Node.js · React · Python)

Dec 2020 – Jun 2021

- Live streaming platforms for Reebok, Colgate, Noel, Faes Farma and FIMPU, with real-time control centers, chat and interactive features (Node.js, Flask and MongoDB).
- **Copropiedad:** digital assembly platform with automatic quorum verification, electronic voting and live presentations.

Asesorías en Sistemas GOD · Software Developer (Odoo · Java · COBOL)

2019

- Implemented **Odoo ERP** (purchasing, sales, CRM, accounting, invoicing and e-commerce) and built custom modules in Python, PostgreSQL and XML.
- Developed **applications in Java and COBOL** and managed Linux Debian servers on Azure.

Earlier experience: Softka, Backend Developer for Protección, a Colombian pension fund (2021) · CESDE, Fullstack .NET C# intern (2017).

PERSONAL PROJECTS

- **World Cup 2026 live** (mundial.ryukplay.dev): real-time results site and free scoreboard widget for streamers on OBS and Streamlabs.
- **RyukPowerBI** (powerbi.ryukplay.dev): automatic dashboard generator from CSV, Excel or Power BI (.pbix) files.

COMMUNITY AND TEACHING

- **Node Colombia**, co-organizer since 2018 (meetups and full-stack bootcamp) · **Google Women Techmakers**, Ambassador since 2023 · **CaminoDev**, co-founder and podcast host.
- Mentor at Coderise (2017–2020), Python instructor at Cisco Networking Academy (2020) and academic coordinator at EDteam (2020).
- PyCon Colombia organizing team (2018 and 2020), Data Science Fem volunteer (2018–2020) and Droids 4 Droids Colombia organizer (2018).

EDUCATION AND LANGUAGES

- Software Development Technologist, SENA (in progress) · Software Development Technician, SENA (2022)
- Spanish (native) · English: technical reading and writing, conversational in progress
